Summary

Experienced Front-End Developer with 3 years of expertise in developing responsive, high-performance web applications and eCommerce solutions. Proficient in HTML5, CSS3, JavaScript, TypeScript, and comprehensive experience with Angular ecosystem (AngularJS through Angular 20) and React. Strong experience in responsive design, cross-browser compatibility, and performance optimization. Skilled in integrating with CMS platforms and third-party tools, with a proven track record of delivering user-focused digital experiences in Agile environments.

Experience

Front-End Developer - Tamimah Digital
Cochin, Kerala
Jun 2022 – June 2025

- Developed scalable and high-performance web applications using the **Angular ecosystem** (AngularJS, 14, 15, 17, 18, 20), **React**, and **Node.js**, leveraging modern tools and techniques to deliver responsive and efficient user experiences.
- Specialized in **Angular development** with extensive experience implementing cutting-edge features including **Angular Signals** for reactive state management and improved performance.
- Implemented **Angular 18+ features** such as **standalone components**, **directive composition API**, and an **improved reactivity system** to streamline development workflows and simplify application architecture.
- Built reusable **Angular components** incorporating best practices like **lazy loading** and **dynamic imports** to optimize performance and maintainability.
- Advanced expertise in **Angular state management** using **RxJS** and **Angular Signals**, achieving seamless data handling and reducing rendering times significantly.
- Leveraged **Angular HTTP interceptors** for consistent API integration and improved error handling across applications.
- Implemented **Angular Material** to create visually appealing, accessible, and responsive UI components following **Material Design principles**.
- Developed **React applications** using **React Query** and **Redux** for efficient data fetching, caching, and state management.
- Integrated **GraphQL APIs** in both Angular and React applications, leveraging tools like **Apollo Client** for efficient data management, querying, and real-time data fetching.
- Collaborated with API teams to integrate **RESTful APIs** utilizing Angular's reactive patterns and React's **useEffect** with **fetch/axios**.
- Designed and developed backend services using **Node.js** and **Express.js**, creating RESTful APIs to support scalable applications.
- **Implemented NX architecture** for managing monorepos, enabling better organization, scalability, and shared codebase for frontend (Angular).
- Worked with **MongoDB** and **PostgreSQL** for database management, optimizing queries for efficient data storage and retrieval.
- Configured and maintained **CI/CD pipelines** using **GitHub Actions**, enabling automated builds, testing, and deployments.
- Maintained **brand consistency** and visual identity across digital touchpoints in **Agile methodology** environments.

Key Projects

Oman Stock
Tech: React, Redux, JavaScript, HTML5, CSS3

- Built secure admin portal using React functional components and hooks with role-based authentication system .
- Implemented Redux for centralized state management handling complex admin operations and user permissions .
- Optimized performance using React.memo, useMemo, and lazy loading .

Mass SMS Management System - Ooredoo
Tech: Angular 17, TypeScript, RxJS, Angular Material

- Developed comprehensive SMS management platform for Ooredoo telecommunications handling bulk messaging operations .
- Implemented Angular Reactive Forms with real-time validation for message composition and recipient management .
- Built scalable messaging queue system using RxJS operators for efficient batch processing of messages.
- Created responsive dashboard with Angular Material components for SMS analytics and delivery tracking.

Real-Time Chat Application
Tech: React, SignalR, JavaScript, HTML5, CSS3

- Developed real-time messaging application using React functional components and SignalR for instant communication
- Implemented SignalR Hub connections for bidirectional real-time messaging with automatic reconnection handling

Digital Welfare Platform - Tabseet
Tech: Angular 18, Angular Signals, TypeScript, HTML5, CSS3

- Built comprehensive welfare management platform using Angular 18 with Signals for reactive state management
- Implemented Nx monorepo architecture with shared libraries for scalable code organization and reusability
- Developed Angular standalone components with Signals replacing traditional RxJS patterns for simpler state handling

Technical Skills

Languages: JavaScript, TypeScript, HTML5, CSS3, SQL
Frontend: Angular (14,18, 20), React, Bootstrap, Angular Material
Backend: Node.js, Express.js, RESTful APIs
Database: MongoDB, PostgreSQL
Tools: Git, GitHub, GitHub Actions, Netlify
Cloud: AWS (Lambda, EC2), API Gateway
Others: Responsive Design, Cross-browser Testing, Agile Methodology

Education

Master Of Computer Application – University Of Calicut

Language

English
